GOLD TESTING DUBLIN

XRF Precious-Metal Testing · Live Melt Valuation

Non-Destructive XRF Analysis and Live Spot Pricing

This certifies that the item described on the affixed label was analysed at Gold Testing Dublin using calibrated XRF spectrometry. Its composition, purity, weight and indicative melt value at today's spot price are recorded on the certified label and the linked digital certificate.

IMPORTANT — PLEASE READ

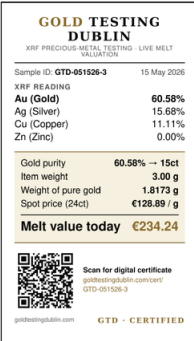

The values shown on the affixed label are **indicative only** and reflect the **spot melt price at the moment of testing**. Gold and silver markets move continuously and this figure will change with the live spot price.

XRF measures only the **surface** of an item, so readings can be affected by plating, solder, rhodium or heavy polish. Stated purities carry a typical tolerance of **±1.0%** by mass. Gemstones, pearls, enamel, watch movements and other non-metallic parts are **excluded** from the melt calculation only where the operator could separate them; otherwise the gross weight overstates the recoverable metal.

The melt value is a **refiner's input estimate** — not a retail or resale valuation. It excludes refining losses, processing fees, dealer margins, VAT and any numismatic, antique, designer or sentimental premium. This document **does not** constitute an offer to purchase or a guarantee of resale price.

Scan the **QR code** on the affixed label to view the full digital certificate, including a photograph of the tested item.
